

# Our Sustainability

# Practices

## **Our Building**

During the restoration and redevelopment of The Common Room, we implemented retrofit measures like Heating system upgrades etc. to enhance sustainability while preserving its historic charm. Our approach reflects our dedication to balancing modern efficiency with respect for heritage.

## **Waste Reduction**

From reusable cups and plates to sourcing from local suppliers we prioritise waste reduction at every opportunity. Additionally, duplicate books received as donations are redirected to organizations like AnyBook for resale or recycling, minimising waste and maximising resource efficiency.

## **Sustainable Transportation:**

Located centrally, The Common Room promotes walking as a primary mode of transportation, minimizing carbon emissions associated with commuting by car. By encouraging sustainable transportation options, we strive to reduce our environmental impact while promoting healthier lifestyles.

## **Energy Efficiency:**

Despite being a Grade II\* listed building, we ensured compliance with all regulations like energy saving lighting measures etc. while significantly improving energy efficiency. While we continue to explore emerging technologies, our commitment to reducing energy consumption remains unwavering.
